   – https://www.vmware.com/products/workstation-player.html

2. Install Ubuntu

    ■ If the following URL is not available, search from Google

        ◆ Download installed Ubuntu Image

        – https://www.osboxes.org/ubuntu/#ubuntu-16-04-vmware ()

        ◆ Run the downloaded Ubuntu

        – https://www.youtube.com/watch?v=_YzDc1x-sOs (Guide for running Ubuntu image on VMWare)

- **Check for the Installation**

■ **VMWare Player**

■ **Ubuntu on VMware**

■ Open the Terminal

- Shortcut: ctrl + alt + T

- **Other possible options when we meet the problems**

  - Use cloud services (Amazon, Google, Microsoft)

  - Use "Virtual Box" instead of "Vmware"

  - Install "Ubuntu" directly on virtual machines instead of running the images in osboxes
